JAX at BAL | Book vs Kalshi vs model

Main lines, then every alternate rung inside each player's simulated range

Main lines: the most common big-book line, median odds across books, and the books' Over % with their cut removed.
Kalshi: Yes / No price in cents at the same number (x+ means x or more; a book line of 64.5 = Kalshi 65+).
Model: median of 25,000 sims, and the share of sims that go over the line. Model minus books: positive = model likes the Over.

Ladders: for every rung posted by Kalshi or a book between the player's lowest and highest simulated result:
model % = share of sims at or above the rung; Kalshi Yes / No in cents; best book alternate Over price (book).
Book alternate prices include the book's cut. Kalshi prices are asks before Kalshi's fee; '-' = no real offer (ask 95c+).
† = model blind spot (shown, never bet).

Captured: books 20:05 UTC, Kalshi 20:25 UTC, projections 2026-11-03 20:37 UTC (Nov 3). Prices move; re-check before betting.

Simulation projections, not guarantees. Bet responsibly. 21+. 1-800-GAMBLER.
